

Welcome to The Ultimate Biohacker Operating System

Thank you for inviting us into your wellness ritual. Here's everything you need — it takes about two minutes.

Step 1 • Open your app

Your access link: <https://your-deployment-url.com> (Seller: replace with your deployed URL — see docs/deploy.md — before exporting this page as the delivered PDF.)

Open it in the browser on any device. That's it — no account required to begin; your data stays on your device.

Step 2 • Install it like a real app

- **iPhone / iPad** — open the link in *Safari* → tap the Share square → **Add to Home Screen**
- **Android** — open in *Chrome* → menu (⋮) → **Install app**
- **Desktop** — click the little install icon at the right end of the address bar

It opens full-screen with its own icon, works offline, and feels completely native.

Step 3 • Take the two-minute onboarding

Tell it your main goal and switch on the modules you actually use — peptides, GLP-1, HRT, menopause, supplements, red light, cold plunge, sauna, labs, wearables, pets, household. Your OS shapes itself around your answers (and you can change everything later in Settings).

Step 4 • Print your companion binder

Inside the app: **Printable Studio** → tick the pages you want → *Print*.

- Choose "Save as PDF" in the print dialog to create a digital copy
- Import that PDF into **GoodNotes** or **Notability** and every page becomes stylus-writable
- Tick "Pre-fill with my current data" for pages that arrive already filled in ✨

Backing up — please actually do this

This app stores everything **only in this browser** — there is no account, and no server copy. Clearing your browser's data, switching phones, or your browser quietly clearing storage can erase it all permanently. The app will remind you on the dashboard when a backup is overdue, but don't wait for the reminder the first time:

Settings → **Export backup** downloads a single file with everything. Keep it somewhere safe (iCloud, Google Drive). Restore it on any device with **Restore backup**. Do this every couple of weeks — your data belongs to you, but only if you keep a copy of it.

A few loving reminders

- Every dose field in this planner records what **your provider or product label** says — the app never suggests or adjusts doses.
- The Reconstitution Studio does arithmetic only. Confirm your mixing instructions with your pharmacy.
- This is an organizational tool, not medical advice, and it never replaces your own provider.

Need help?

Message us on Etsy anytime — we answer fast and kindly. If something's not working, we will make it right.

With warmth, GlowHausDigital 🌿
